Art Unit: 3751

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Parsons et al. and Ingalz.

The Parsons et al. (Parsons) reference (Figs. 6-12) discloses a sanitary ware comprising: a body (associated with 16) including a load 30 having a sensor 20; a micro hydraulic generator 90 including a housing 12, a water flow pipe element 32 having interlocking covers (threaded cover of battery 24 compartment), a reservoir 92,94 with a flap axle 144 and a magnetic ring 158, an inlet pipe 15 and an outlet pipe 18, a generator set 66 having a magnetic ring 152, and a regulating mechanism (col. 3 lns. 30-31); and a charge control circuit

Art Unit: 3751

including an accumulator 24, a rectifying diode 116, and a limiting resistor 126. Therefore, Parsons teaches all claimed elements except for the provision of a zener diode.

Although the charge control circuit of the Parsons hydraulic generator does not include a zener diode, as claimed, attention is directed to the Ingalz reference which discloses an analogous generator 29 which further includes a charge control circuit (Fig. 8) having a zener diode 81. Therefore, in consideration of Ingalz, it would have been obvious to one of ordinary skill in the charge control circuit art to associate a zener diode with the Parsons hydraulic generator in order to limit voltage.

Applicant argues at pages 6-8 of the response filed January 25, 2006 neither Parsons nor Ingalz disclose all elements recited in claim 8. The examiner agrees. Applicant argues at page 8 of the response if the Parsons and Ingalz disclosures were combined, the claimed invention would not result. The examiner can not agree. A worker in the charge control circuit art would consider associating a zener diode, as taught by Ingalz, with the charge control circuit taught by Parsons to gain the stated benefit of limiting voltage (Ingalz, col. 5 lns 37-49).

3. Applicant is referred to MPEP 714.02 and 608.01(o) in responding to this Office action.

4. The grounds of rejection have been reconsidered in light of applicant's arguments, but are still deemed to be proper.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
